

"Pure Fresh Natural Chemical Free Mineral Water"

EMERGENCY PROCEDURES

HUMAN EXCREMENT IN THE POOL

1. Ensure all swimmers vacate the pool immediately and keep the pool closed for at least 24 hours. (During this period ensure that the pool is effectively closed, appropriate signage is displayed and concerned members are attended to)
2. Immediately remove the excrement from the pool. While doing this, ascertain whether it is a loose stool or a solid.
3. Contact the Regional Maintenance Manager, the Regional Health & Safety Manager, and Regional General Manager to inform them of the occurrence.
4. Switch OFF system and switch OFF e-clear units and Backwash filters
5. Switch ON system and switch ON e-clear units (return system to normal operating mode)
6. Shock the pool with 50% Hypox (Liquid Oxygen) – 15L per 100,000L
7. After 30 minutes add 100-200ml flocculant (eg ECOFLOC) according to manufacturer's recommendations (The Regional Maintenance Manager or Regional Health & Safety Manager will provide ECOFLOC (flocculant) to put in the pool.)
8. Vacuum the pool thoroughly
9. Request bacteriological test within 12 hours of adding Liquid Oxygen
10. Open the pool 24 hours after incident.
11. Do not put covers over the pool for the 24 hours.

VOMIT IN THE POOL

1. The same procedure needs to be followed when a member throws up in the pool, except that the pool only needs to be closed for 12 hours. The pool will still need to be vacuumed and backwashed before opening.

BLOOD IN THE POOL

1. For blood in the pool, the same procedure needs to be followed, except that the pool only needs to be closed for 1 hour.
2. Ensure there is no visible evidence of blood in or around the pool before opening.
